

CHILDREN & ENVIRONMENT

The young friends of [Asterias Children's Club](#), the mini – club of [Creta Maris Convention & Golf Resort](#), had the opportunity to visit the Biological Garden of the hotel.

This activity was part of the overall context of the environmental program of Maris Green Team, the ecological team of the hotel, whose aim was to bring children closer to the natural environment.

The children participated in this action with their parents and were able to come in touch with different kinds of vegetables such as tomatoes, zucchini, peppers and fruits like watermelons, melons, figs and mulberries as well as herbs, such as basil and oregano.

It is considered noteworthy that the Biological Garden has been created in the most natural and environmentally safe way. In particular, regarding the fertilization and creation of plants, the method of bees has been used. The bees alone contribute significantly to the production of the garden, without any human or artificial intervention.

Furthermore, our young visitors met and fed the animals that have been raised in the Biological garden.

Continuing their visit, the guests of [Asterias Children's Club](#) engaged themselves in painting, by drawing and coloring all the things they saw and were impressed by, and gave the promise to learn more about the environment, to respect and care it.
